

Accelerating Innovative Solutions

ACQUIRES LUCID LABS

EXPANDED ENGINEERING & PROTOTYPING SERVICES

Accelerate product innovation and development, reduce risk, and prepare products for successful commercialization with Velocity's embedded engineering expertise, rapid prototyping, precision manufacturing, and quality-focused process.

Velocity is more than a trusted manufacturer. We're an extension of your product development and engineering team.

Velocity Engineering, Launch & Optimization Lab

A dedicated environment for early-stage development, prototyping, process development and optimization.

- Purpose-built resources for early-stage development and innovation
- Enables faster prototyping, process development and optimization
- Helps reduce development bottlenecks without disrupting production
- Supports a seamless transition from concept to manufacturing readiness

Need to Develop a
Complex Medical Device?

Embedded Engineering Services

- Mechanical Engineering
- Component & System Integration
- Process Development
- Manufacturing Readiness
- Design Optimization
- Design for Manufacturability (DFM)
- Engineering Support from Concept to Production

Product Development

- Concept Development
- Ideation
- Product Design
- Medical Device Development
- Medical Device Delivery System Development

Rapid Prototyping

- Multi-axis CNC & Swiss Machining
- 3D Printing
- Functional Prototypes
- Production-Quality Prototypes
